

...YOUR RELIABLE
STEEL PARTNER

ABOUT MADESTA

Madesta is a steel trading and service company, with the production facilities located in Latvia. The company was established in 2000 as a steel trader and has since transformed itself into a comprehensive steel treatment center delivering prefabricated steel parts worldwide. Madesta is a team of professionals dedicated to the goal of delivering high quality products and services to its customers. We offer a unique combination of the Eastern European prices for plate and fabrication with the Western European quality of steel processing and service delivery.

PRODUCTION FACILITIES

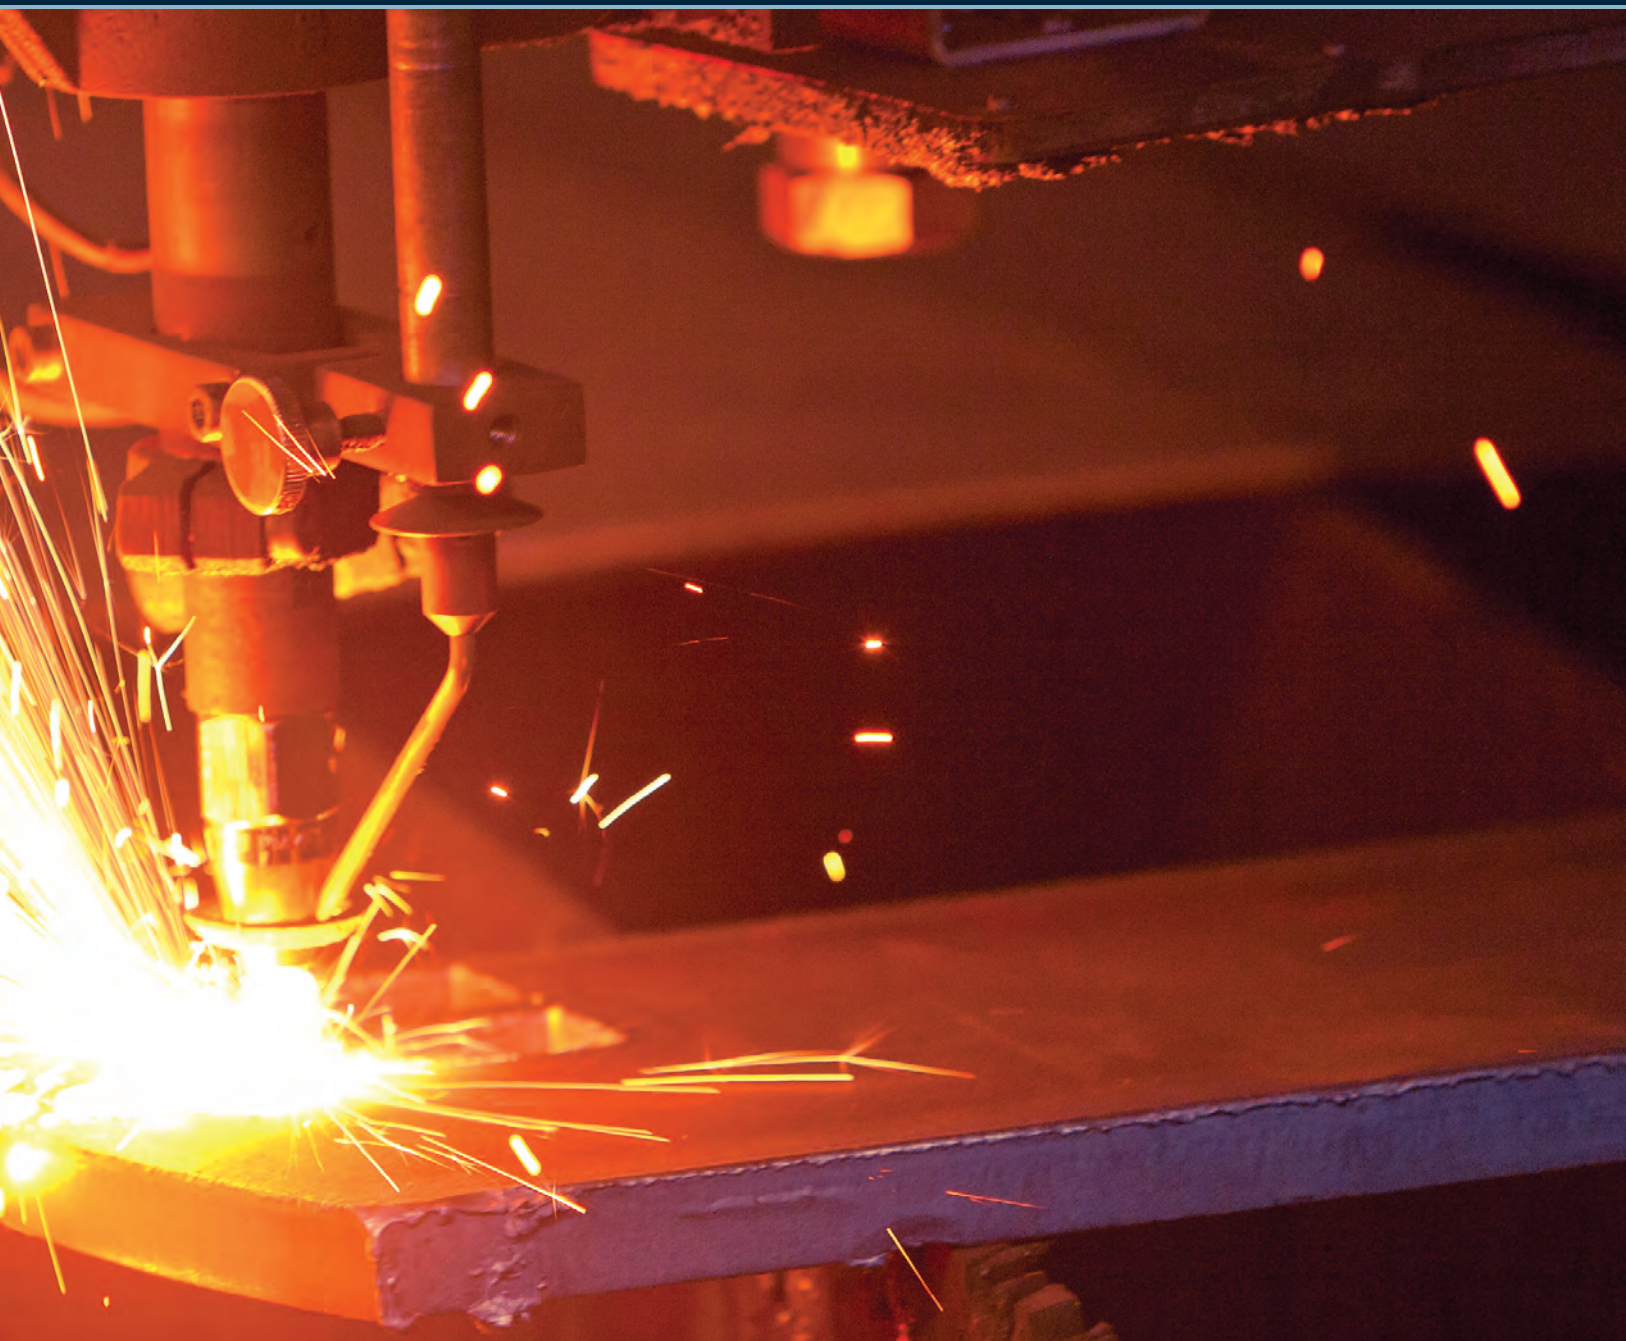

MADESTA performs steel prefabrication at production facilities located in Latvia and Ukraine. Total production capacity of three facilities makes up to 3 500 tons per month.

We can process carbon steel, stainless and aluminium steel. We offer a full range of value added services and deliver finished parts ready for final assembly.

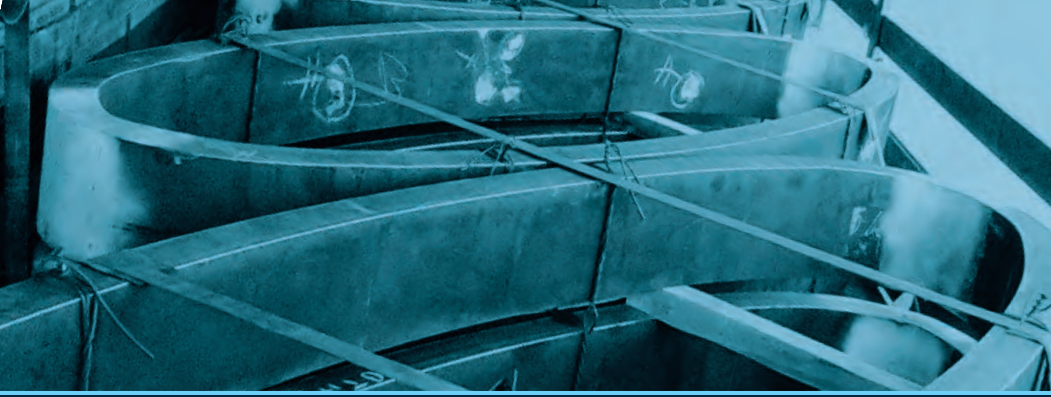

Whatever your requirement for processed plate, our range of cutting equipment can meet most demanding specifications. In addition to the cutting of steel, we offer a comprehensive range of finishing services enabling you to buy the part rather than the plate. You can therefore purchase the finished product just from one source.

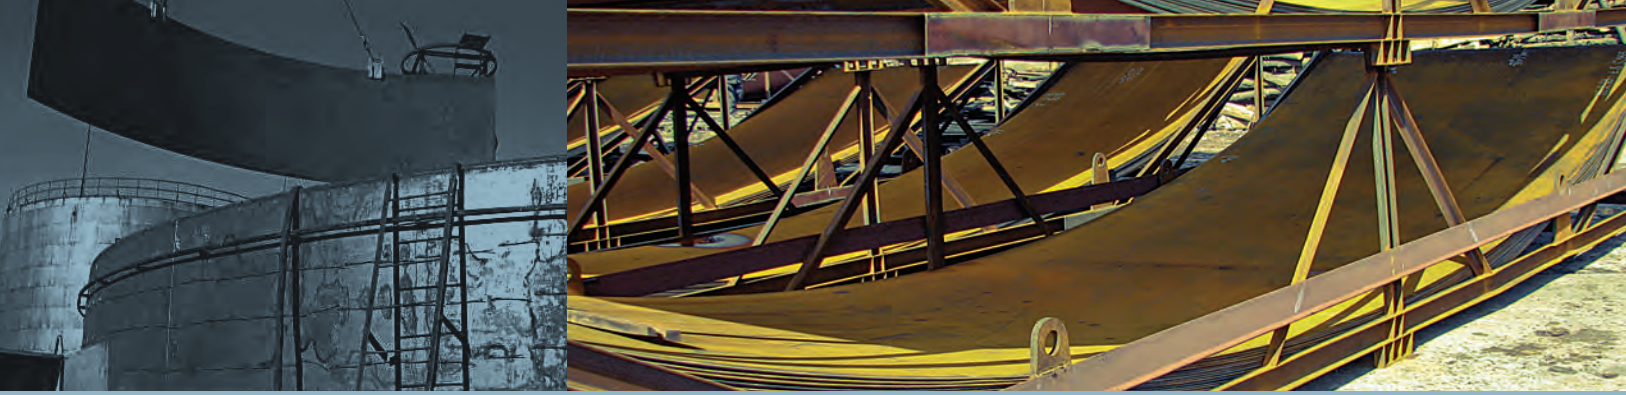

ONSHORE & OFFSHORE TOWERS & MONOPILES

For more than a decade, Madesta has been one of the key suppliers to the wind industry. Offering cut and weld-prepared steel plates, doors and door frames, blade stiffening and anchor rings, foundations and other steel parts used in the production of wind turbines, the company has become a one-stop shop for the OEMs and wind tower manufactures alike.

INDUSTRIAL STORAGE TANKS

Madesta has gained a reputation of a reliable steel parts supplier for the storage tanks and reservoirs constructing industry. As a subsupplier, we offer a complete solution by delivering almost a complete tank farm ready for on-site erection. The package normally includes shell, bottom and roof plates, angles and H-beams. For the shell (rolled) plates, we provide two methods of safe handling and transportation: specially designed steel saddles or wooden racks used for any mode of transport. Both are keeping radius properly at any stage of handling and transportation.

MISCELLANEOUS WELDED & MACHINED PARTS

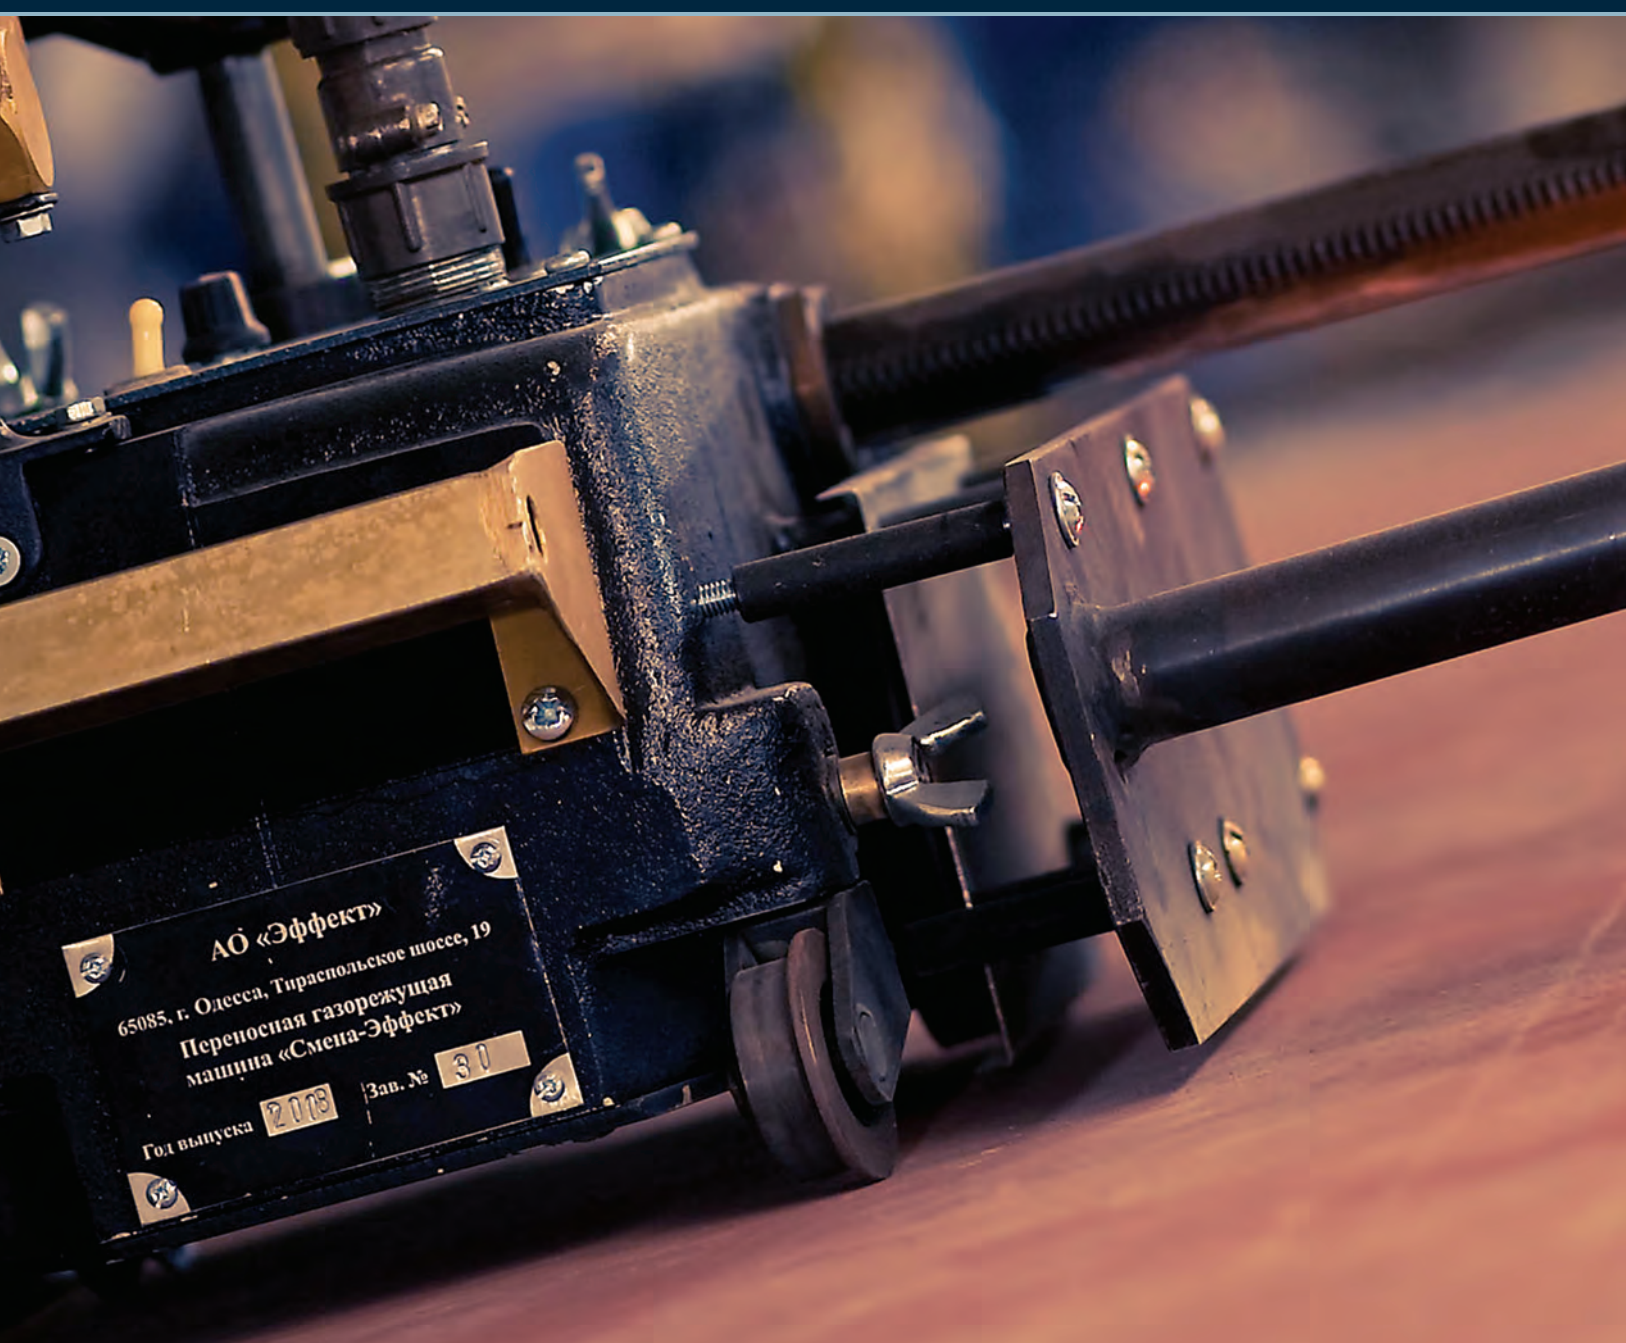

The trend in the sourcing strategies of companies from construction vehicles producers to machine-building companies to infrastructure developers has been shifting towards purchasing already finished, completely treated parts in configurations that are immediately ready to be welded, installed or assembled. In doing so, companies can focus on their core competencies, reduce costs and increase productivity and profitability. Over the last two years Madesta made substantial investments in expanding its production facilities to include drilling, welding and machining operations in its range of services to use these opportunities. We are always ready to study every individual inquiry for steel components and structures and try to provide our customers the most competitive solution.

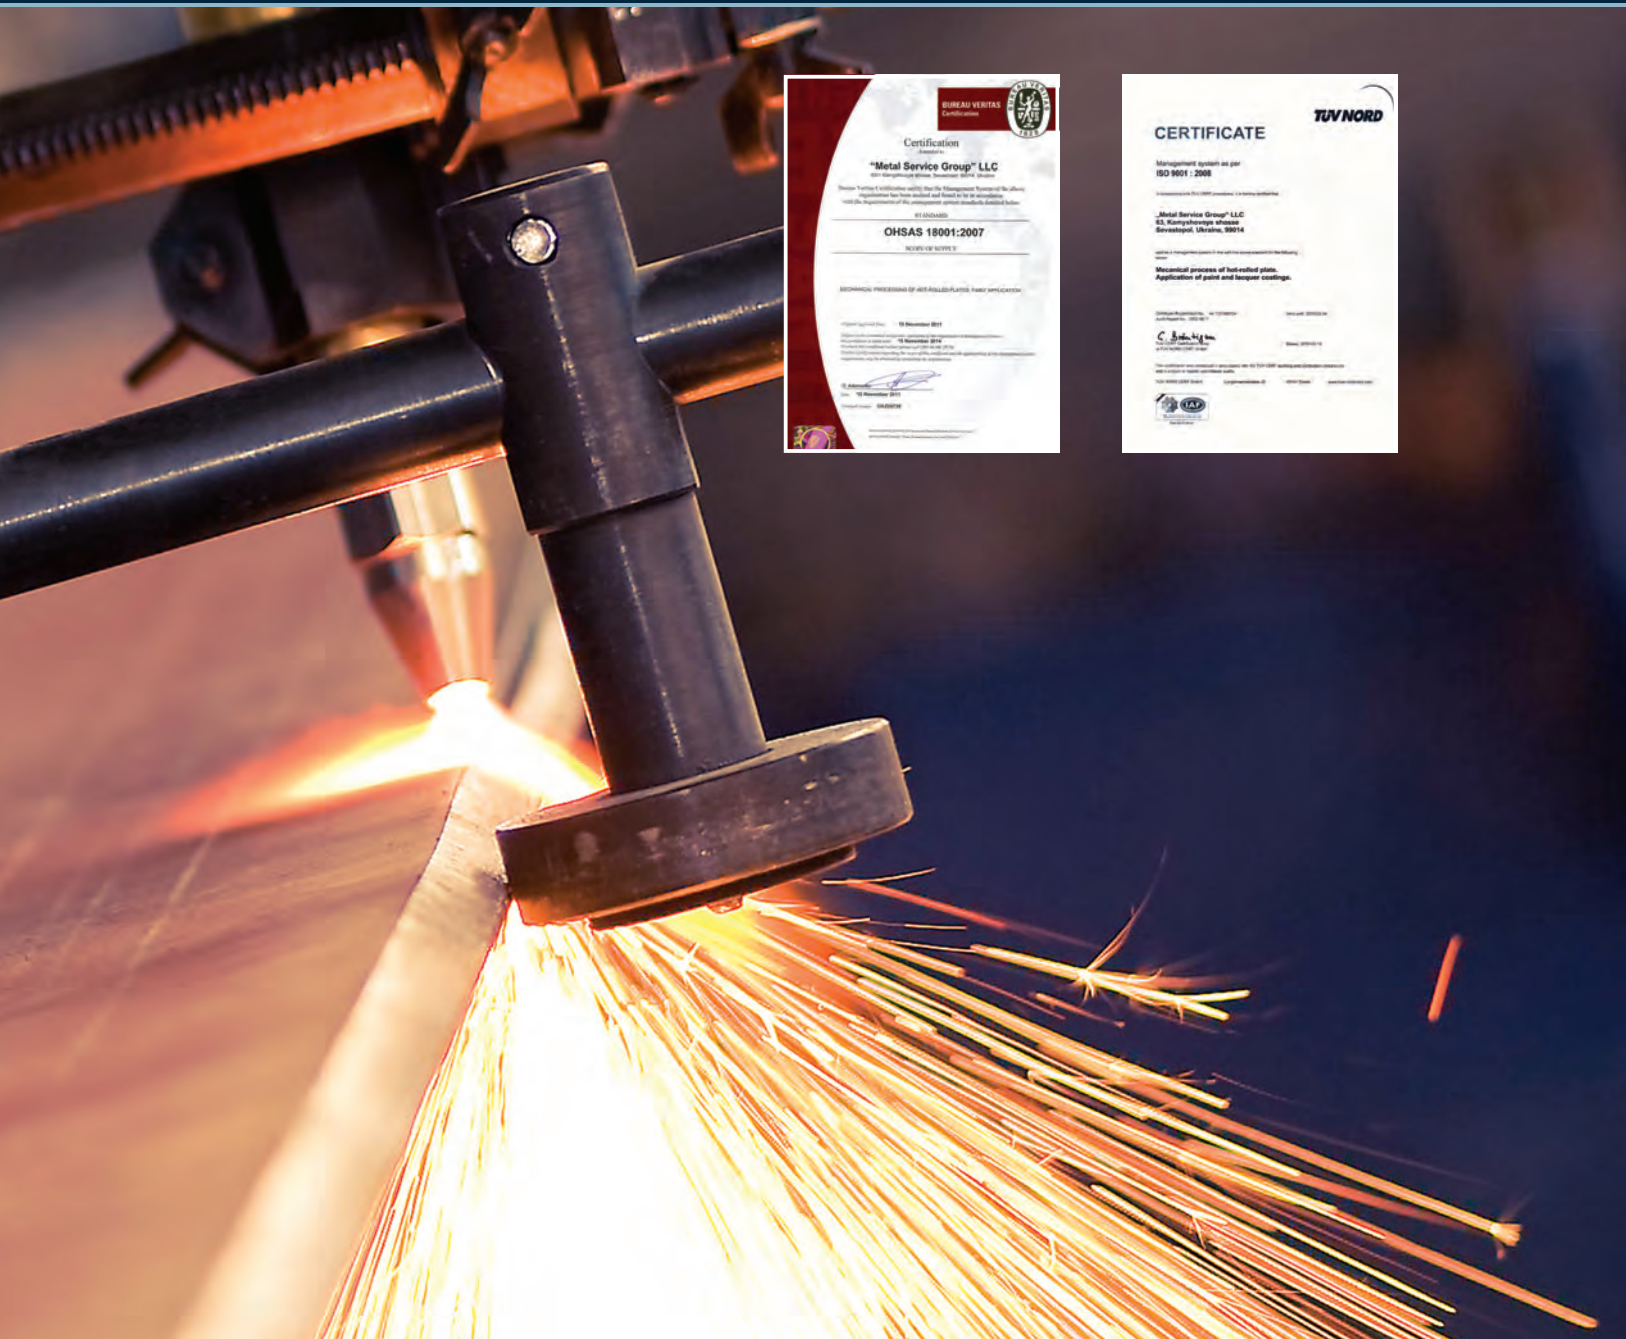

OUR STANDARDS ON QUALITY & SAFETY

Quality is an integral part of any company but it is imperative when you are supplying ready for assembly prefabricated parts to a range of diverse markets. Our production facilities are audited to ISO 9001:2008 by BV as well as being independently audited and approved by customers. Each plate has full traceability uniquely identified with its own tag number in addition to mill heat and plate numbers enabling everything to be tracked easily through our quality management system. Our goal is to implement quality system according to conditions and terms required by customers through continuous quality improvement and effective cost reduction.

STRONGLY CUSTOMER ORIENTED

We offer flexible production under the motto “quality delivery on time”. We achieve this by:

- providing door-to-door logistical services in partnership with different logistical operators and forwarding companies worldwide;
- purchasing steel direct from manufactures in large volumes and transferring the benefits to our clients;
- keeping customers up to date with the status of the orders automatically through our web-site based customer support system;
- communicating efficiently and effectively with our customers by having sales offices in Europe (Belgium), America (Texas, USA), Turkey and one in Ukraine for the CIS countries.
